

Homework #7

For this assignment, you may download the CSS framework file from me or create one yourself.

http://newton.ncc.edu/gansonj/ite154/templates/ite154_hw9_sp19_template.txt

The user will enter 2 numbers into a form, a starting number and an ending number. Your program will print the integers from startnum to endnum. But for multiples of three print " FIZZ" along with the number and for the multiples of five print " BUZZ" along with the number. For numbers that are multiples of both three and five print " BLAMMO".

To determine if a number is a multiple of another number, you must use the modulus operand. You can find more information in Google. Try googling "JavaScript modulus operand". Or you can try googling "JavaScript determine if number is multiple of another number".

Sample runs of the program are on the following pages. There are 2 of them.

Sample run #1

file:///Users/nosnag/Desktop/ite154_hw7_fa15_sol.ht

Going Loopy with Loops!!!

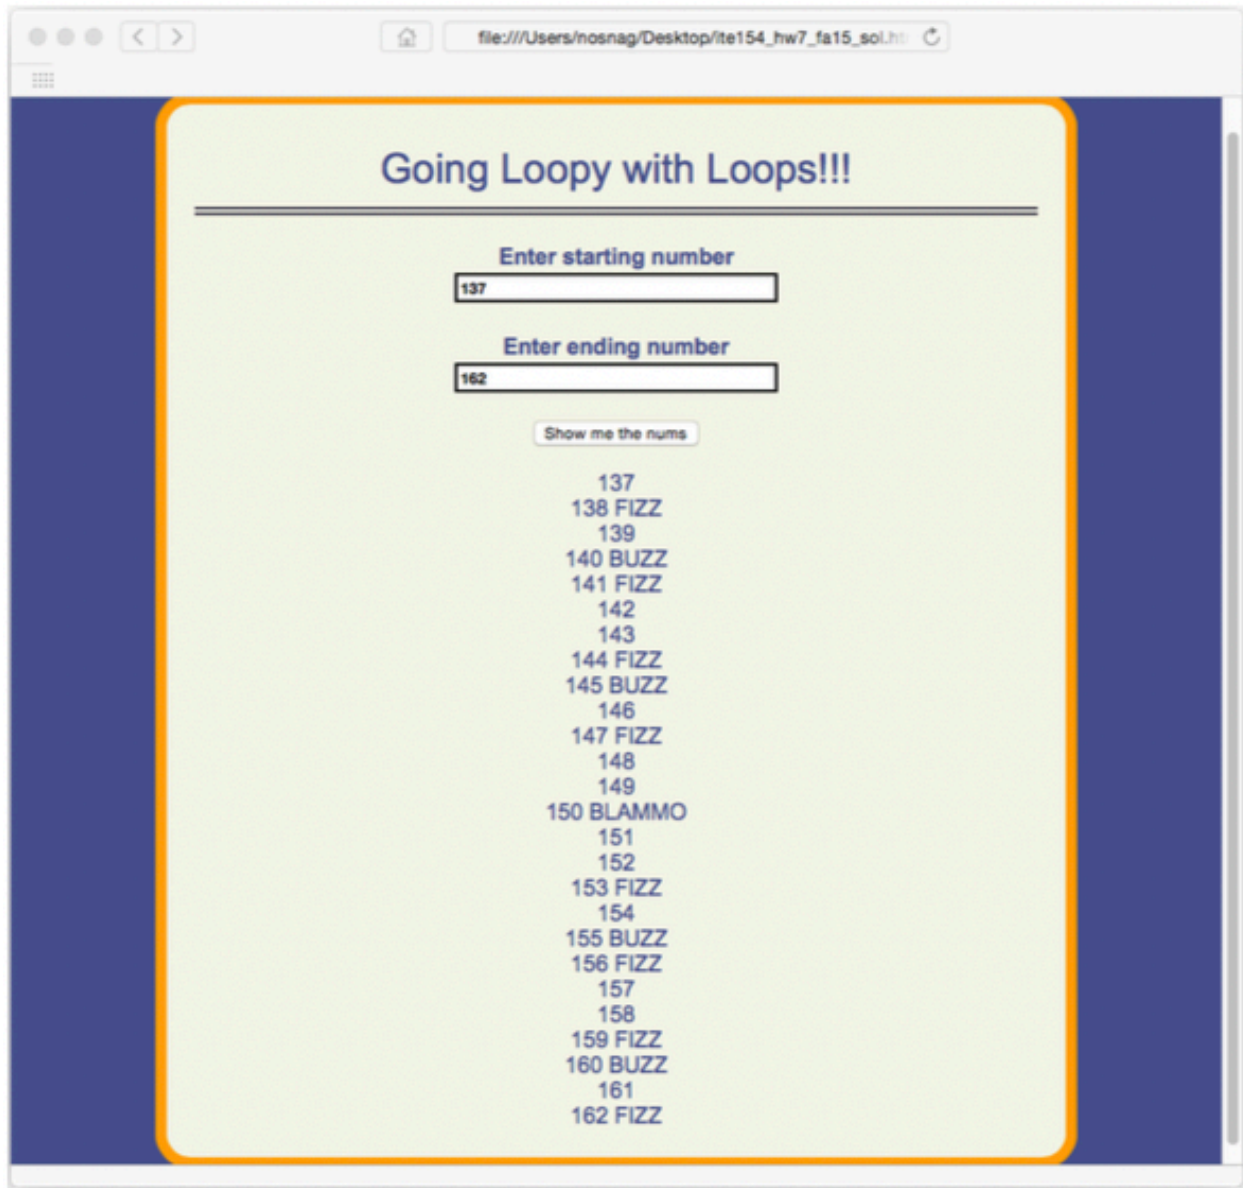

Enter starting number

Enter ending number

Show me the nums

5 BUZZ
6 FIZZ
7
8
9 FIZZ
10 BUZZ
11
12 FIZZ
13
14
15 BLAMMO
16
17
18 FIZZ
19
20 BUZZ

Sample run #2

file:///Users/nosnag/Desktop/ite154_hw7_fa15_sol.htm

Going Loopy with Loops!!!

Enter starting number

Enter ending number

Show me the nums

137
138 FIZZ
139
140 BUZZ
141 FIZZ
142
143
144 FIZZ
145 BUZZ
146
147 FIZZ
148
149
150 BLAMMO
151
152
153 FIZZ
154
155 BUZZ
156 FIZZ
157
158
159 FIZZ
160 BUZZ
161
162 FIZZ
